

# IDG FUEL/ OIL HEAT EXCHANGER

## **UA538297-6 (767-200 Series Airframe Mount)**

The fuel/oil heat exchanger consists of a tube bundle and shell assembly. Fuel-flow through the tube bundle cools the oil flow around the tubes.

Cold fuel is directed from the fuel in port through passages in the core to the fuel out port. This fuel cools oil from the integrated drive generator system

**With Triumph Thermal Systems' in-house design, development, testing, and manufacturing capabilities, along with NewGenAerospace's quality service, innovative programs and distribution networks, our partnership is uniquely able to bring solutions to you faster than anyone else in the business.**

Since 1929, Triumph Thermal Systems (TTS) has been providing high-quality thermal management technologies to commercial customers worldwide.

### **TRIUMPH THERMAL SYSTEMS:**

- provides heat exchangers in aluminum, stainless steel and inconel material options for both plate fin and tubular geometries
- supports Liquid Cooling Systems for airborne electronics thermal management
- provides high-quality thermal management technologies and is committed to being a leading global manufacturer and supplier of heat exchange and thermal transfer systems and components
- is a premier solution provider for aircraft thermal management systems and support
- provides Plate Fin, Tubular, and Surface Heat Exchangers, Liquid Cooling Systems, Electronic Cooling Systems, Oil Reservoirs and High Temperature Bleed Air Environmental Control System Heat Exchangers
